What is the concern for saving
Paraquat?

What's so important

What is the future for Paraquat?

What alternatives should we be looking at?

Alternative knockdowns

- Glyphosate
 - Group 14's (Group G's)
 - Glufosinate
 - Amitrole
-
- Alternative double knocks

Increasing performance of low Paraquat rates

- Surfactants (especially wetter)
- Water rates
- Amitrole (ie Guerilla, Paratrooper, Alliance)
- Diuron
- Boxer Gold, Mateno Complete, Overwatch
- Group 14's (eg Voraxor, Sharpen, Terrad'or, Terrain)

Optical spot spraying?

Why are APVMA calling for reduced rates of Paraquat?

What other options do we have?

- Competitive crops
- Pre-em's and pre-em mixes
- Cultivation (or disturbance at seeding)
- Slashing
- Grazing
- Burning

What about late season?

SAGIT project investigating alternatives for;

- Desiccant replacement
- Seed set reduction
